

cycle graph theory wikipedia - in graph theory a cycle in a graph is a non empty trail in which the only repeated vertices are the first and last vertices a directed cycle in a directed graph is a non empty directed trail in which the only repeated are the first and last vertices a graph without cycles is called an acyclic graph a directed graph without directed cycles is called a directed acyclic graph, **set theory union intersection complement difference** - venn diagrams the union intersection difference and complement of sets can be depicted graphically by means of venn diagrams in a venn diagram the universe u is represented by points within a rectangle and sets a b c etc are represented by points inside circles within the rectangle, **singular matrix from wolfram mathworld** - the following table gives the numbers of singular matrices for certain matrix classes, **hermitian matrix from wolfram mathworld** - a square matrix is called hermitian if it is self adjoint therefore a hermitian matrix a a_{ij} is defined as one for which $a_{ij} = \overline{a_{ji}}$ where \overline{a} denotes the conjugate transpose this is equivalent to the condition $a_{ij} = \overline{a_{ji}}$ where z denotes the complex conjugate as a result of this definition the diagonal elements a_{ii} of a hermitian matrix are real numbers since $a_{ii} = \overline{a_{ii}}$, **party acquaintances cut the knot org** - an interesting problem has entered mathematical folklore in the 1950s it was included in the putnam competition in 1953 and posted in the problem section of the american mathematical monthly in 1958 problem e 1321 martin gardner wrote about it on three different occasions while proving an, **chemistry chemical equilibrium problems i technical** - the finish line is found by adding the start and the change entries in each column we are assuming the reaction goes forward when we used a x for a and b if we are wrong the reaction actually goes backwards the only thing that will happen is that x will be negative which is no big deal the entries on the finish line are the equilibrium concentrations of each component
